Chapter 37 Problem 28[†]

Given $\lambda = 650 \ nm = 6.50 \times 10^{-7} \ m$

Solution

Find the band gap for a GaAsP LED.

The energy of the photon is close to the energy of the band gap. Therefore, calculating the energy of the photon gives the band gap of this material.

$$E = \frac{hc}{\lambda} = \frac{(6.63 \times 10^{-34} \ J \cdot s)(3.00 \times 10^8 \ m/s)}{6.50 \times 10^{-7} \ m} = 3.06 \times 10^{-19} \ J$$

Convert this to electron volts gives

E=1.91~eV
